What is CAM360 AmnioGraft™?

CAM360 AmnioGraft (CAM360 AG) is human Cryopreserved Amniotic Membrane (CAM), which is known for its natural ability to promote healing.[1] With its anti-inflammatory, and anti-scarring properties, it may help your body to restore your eye's health.[2]

CAM has been shown to reduce the signs & symptoms associated with Dry Eye Disease.[3]

What is Amniotic Membrane Tissue?

The Amniotic Membrane is part of the placenta that surrounds and protects a baby during pregnancy. This unique tissue is known for its natural ability to promote healing.[2] With over 25 years of clinical evidence, BioTissue utilizes its proprietary CryoTek® cryopreservation processing method. This method preserves a key component that helps reduce inflammation, minimizes scarring, and supports the healing of your eye.[4]

When Your Physician May Recommend CAM360 AG

CAM360 AG was developed to optimize comfort for patients with early-stage Dry Eye Disease and reduced corneal sensitivity.

Mild to Moderate: Superficial Punctate Keratitis (SPK) Dry Eye Disease (DED)

Neurotrophic Keratitis (NK)
Stage 1

CAM360 AG Treatment Benefits

Traditional treatments often focus on just one aspect of dry eye—either reducing inflammation or promoting healing. CAM, however, does both.[2]

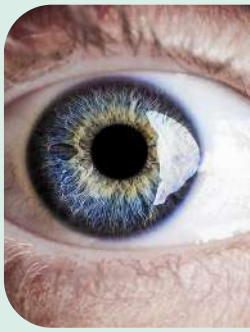

CAM exerts anti-inflammatory and anti-scarring actions that may help promote the body's natural healing capabilities.[2] Clinical evidence also demonstrates the role of CAM, in nerve regeneration for patients suffering from dry eye.[3]

Where does Amniotic Membrane Tissue come from?

The tissue is donated by consenting healthy mothers after a traditional birth or planned Cesarean Section (C-Section) within the U.S. Donor suitability is determined through social, physical, and medical screening in strict compliance with all Current Good Tissue Practices (CGTPs) as mandated by the U.S. Food and Drug Administration (FDA) and the rigorous requirements of the American Association of Tissue Banks (AATB).

Is CAM360 AG safe?

The Amniotic Membrane in CAM360 AG is provided by an FDA-registered tissue bank. The tissue has passed numerous safety and quality control tests before it is provided to your physician. Ask your physician if you have questions about using CAM360 AG to treat your eyes.

"My vision became so much clearer, like wiping away a dirty lens. Just a week later, I traveled to Colorado, and for the first time in years, I experienced ***no eye pain****,* ***dryness****, or* ***redness****."*

Note: Individual results may vary.

Cryopreserved Amniotic Membrane ***(CAM)*** has been shown to reduce signs & symptoms associated with ***Dry Eye Disease.***[3]

What to Expect

CAM360 AG is laid in a **Collagen Shield (CS)** or **Bandage Contact Lens (BCL)** and then placed on the Ocular Surface.

Depending on the delivery method, treatment duration generally ranges up to 72-hours.

Ask your physician which delivery method they will use and **scan the QR code** for an easy guide to your CAM360 AG treatment.
